EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows: In the abstract on page 150, after the compound of formula (1), insert -- . -- therein.

REASONS FOR ALLOWANCE

2. The following is an examiner's statement of reasons for allowance: None of the applied prior art of record teach or fairly suggest the a photothermographic material containing photosensitive silver halide having silver iodide content of 40 % by mole to 100 % by mole and a compound having beta-lactam ring which is intended to include the so-call antibiotics having a beta-lactam ring in the molecule such as defined on page 17 of the specification disclosure. Kato et al (US Patent No. 5,968,725) may disclose a compound having $-N-C=O$ moiety within the meaning of lactam ring, but the Declaration under 37 CFR 1.132 submitted on March 2, 2005 shows the compound having beta-lactam ring claimed in the present claimed invention provides a photothermographic material with a significant improved property in term of prior-to-use storability and post-development image stability in comparison that containing a gamma-lactam moiety. Van Der Laan et al, cited of interest, disclose beta-lactam antibiotics, but fail to teach or fairly suggest the use thereof in a photothermographic material. Accordingly, the invention as claimed is patentably distinct for the material disclosed in the applied prior art of record, and the claims are in condition for allowance.
